## Challenge

Take any three digit number. You can subtract 100, 200, 300 or 400 once each, but you must not go below 0.

**e.g.  $672 - 100 = 572$ ,  $572 - 300 = 272$ ,  $272 - 200 = 72$ .**

100, 300 and 200 were subtracted to get to 72.

Can you always get to a number between or equal to 100 and 1?

If you use as many subtractions as possible are there any patterns?

# Exemplary Calculation Procedure

## Estimating, Answering and Checking with Inverse Operation

1. Begin by estimating your answer using the nearest multiple of 10 for each number.
2. Perform the exact calculation using your chosen method.
3. Check that your answer is close to your estimate.
4. Check your answer is correct by working backwards using the inverse operation.
